

The shift that **shows up.**

You have repetitive, physical work that has to get done every day, and a labor market that will not reliably staff it. We put a robot on that work and deliver it as a service. **You finance and own the machine. We deliver the labor, the training and the uptime.** No hiring, no turnover, and an asset you keep.

WHY FACILITIES CHOOSE IT

Hours you can count on

Contracted coverage that arrives every scheduled hour. No callouts, no no-shows, no scramble to backfill a shift.

You own the robot

You finance the purchase and hold the machine outright. It is an asset on your books, not a rental you never stop paying.

Your cost steps down

The financing has an end date. Once the machine is paid off you own it free and clear, and your ongoing cost drops to the service alone.

Uptime is our problem

Maintenance, field service, insurance and replacement units are covered under your service agreement. If it stops working, it is not your call to make.

The same standard, every time

The task runs the way it was specified, on every shift, with a record of what was done and when it was done.

Scale without a hiring cycle

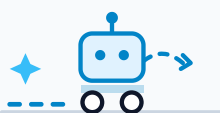

Add hours, add a second shift, add another site. Growth is a line on a service order, not a recruiting problem.

THREE STEPS TO A COVERED SHIFT

1

Identify the work

We walk your site with you and pick the repetitive tasks worth handing over.

2

We train on your floor

The robot learns your layout, your routes and your standard for the job. No IT project on your side.

3

The shift gets covered

Contracted hours begin. You review the work; we handle the labor, the service and everything behind it.

And it keeps getting better. Every hour worked makes the robot better at your building, so the same contract absorbs more of the job over time.

Grocery & retail

Hotels

Fitness clubs

Warehouse & distribution

Franchise services

24-hour operations

Let's scope one site.

A short walkthrough tells us whether this pays for you. It usually takes an hour.
